                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AL157766
AL157766.9
                                                                                                                                                                                                                                                                          regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one Mi3 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Mp:, WORMPEP; Information on the WORMPEP SWISSPROT; Tr:, TREMBL; Mp:, WORMPEP; Information on the WORMPEP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  On Apr 12, 2001 this sequence version replaced gi:12709868. During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either denial corresponding to the property of the sequence was finished as follows unless otherwise noted: all regions were either denial corresponding to the property of the sequence was finished as follows unless otherwise noted: all
IMPORTANT: This sequence is not the entire insert of clone RP11-40020 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap. The true left end of clone RP11-760Ml is at 92594 in this sequence.
                                                                                                                               RP11-40020 is from the library RPCI-11.1 of Pieter de Jong. For further details se
                                                                                                                                                                                        http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 13, constructed by the Sanger Centre Chromosome 13 mapping Group. It currently consists of 19 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC for these proteins. DNA-binding proteins such as histones, chromo CC (chromatin organisation modifier) domain proteins, and Y-box binding CC proteins may contribute to diseases resulting from aberrant DNA CC organisation and/or gene transcription. The sequences of the invention CC are useful in screening assays to identify antagonists and/or agonists CC that may enhance or block activities mediated by DNA-binding proteins. CC Blockers of DNA-binding proteins may be useful in treating disorders CC such as malignant diseases (e.g. cancer), autoimmune disorders CC (e.g. diabetes mellitus), rheumatic diseases (e.g. rheumatoid CC arthritis), genetic abnormalities (e.g. cystic fibrosis), infectious CC diseases (e.g. HIV) and neurological disorders (e.g. Alzheimer's CC used in gene therapy, AAS29030-AAS29157 represent cDNA sequences CC used in gene therapy. AAS29030-AAS29157 represent cDNA sequences CC encoding for novel DNA-binding proteins.

CC Note: The sequence data for this patent did not form part of the printed CC specification, but was obtained in electronic format directly from WIPO

(ARSACS)) gene sequences (I). The spastin gene has been mapped to chromosome 13q11. (I) have neuroprotective activities and can be used in gene therapy and as a spastin polypeptide agonists. (I), their fragments or their complements can be useful for assaying the presence of a nucleic acid molecule in a sample. (I) is useful for diagnosing or aiding in the diagnosis of an early onset neurodegenerative disease in an individual. The neurodegenerative disease comprises reduced sensory nerve conduction, reduced motor nerve velocity, hypermyelination of retinal nerve fibres, atrophy of upper cerebellar vermis, absence of Purkinje cells and abnormal neuronal lipid storage. (I) can also be used to produce antisense nucleic acids, is useful as molecular weight or chromosome
                                                                                                                                                                                   markers, to identify genetic disorders, as hybridisation probes or primers, as an antigen, identify and express recombinant protein for analysis, characterisation or therapeutic use, or as markers for tissues in which the corresponding protein is expressed. Diagnostic methods from the present invention can be used to identify subjects having or at risk of developing a disease or disorder associated with aberrant expression or activity of (1). The assays can be utilised to identify a subject having or at risk of developing a disorder associated with Spastin that the protein of the prot
                                                                               N.B. The present sequence is derived from the human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes human and mouse spastin, and mutated human spastin (autosomal recessive spastic ataxia of Charlevoix-Saguenay
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (UYMC-)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         autosomal recessive spastic ataxia of Charlevoix-Saguenay; mutat neurodegenerative disease; reduced sensory, nerve conduction; dia reduced motor nerve velocity; hypermyelination of retinal nerve atrophy of upper cerebellar vermis; absence of Purkinje cell;
                                                                                                                                 protein or spastin gene expression or encodes a mutated human spastin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated polynucleotide, encoding spastin gene, and polypeptides, useful for diagnosing autosomal recessive spastic ataxia of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 1;

CC (ARSACS)) gene sequences (I). The spastin gene has been mapped to Cc (Arsacs)) gene sequences (I). The spastin gene has been mapped to Cc chromosome 13q11 (I) have neuroprotective activities and can be used in gene therapy and as a spastin polypeptide agonists (I), their fragments Cc or their complements can be useful for assaying the presence of a nucleic acid molecule in a sample. (I) is useful for diagnosing or aiding in the Cc diagnosis of an early onset neurodegenerative disease in an individual. Cc The neurodegenerative disease comprises reduced sensory nerve conduction, creduced motor nerve velocity, hypermyelination of retinal nerve fibres, atrophy of upper cerebellar vermis, absence of Purkinje cells and Cc annormal neuronal lipid storage. (I) can also be used to produce antisense nucleic acids, is useful as molecular weight or chromosome cc markers, to identify genetic disorders, as hybridisation probes or Cc analysis, characterisation or therapeutic use, or as markers for tissues in which the corresponding protein is expressed. Diagnostic methods from the present invention can be used to identify subjects having or at risk of developing a disease or disorder associated with aberrant expression or activity of (I). The assays can be utilised to identify a subject having or at risk of developing a disorder associated with Spastin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated polynucleotide, encoding spastin gene, and useful for diagnosing autosomal recessive spastic ataxia Charlevoix-Saguenay disease by detecting two point mutat

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     B
The present invention describes human and mouse spastin, and mutated CC human spastin (autosomal recessive spastic ataxia of Charlevoix-Saguenay CC (ARSACS)) gene sequences (I). The spastin gene has been mapped to CC chromosome 13q11. (I) have neuroprotective activities and can be used in gene therapy and as a spastin polypeptide agonists. (I), their fragments CC or their complements can be useful for assaying the presence of a nucleic CC acid molecule in a sample. (I) is useful for diagnosing or aiding in the CC acid molecule in a sample. (I) is useful for diagnosing or aiding in the CC acid molecule in a sample (I) is useful for diagnosing or aiding in the CC acid molecule in a sample. (I) is useful for disease in an individual. (CC The neurodegenerative disease comprises reduced sensory nerve conduction, CC reduced motor nerve velocity, hypermyelination of retinal nerve fibres, CC atrophy of upper cerebellar vermis, absence of Purkinje cells and CC abnormal neuronal lipid storage. (I) can also be used to produce antisense nucleic acids, is useful as molecular weight or chromosome CC markers, to identify genetic disorders, as hybridisation probes or cromosome contents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       12621

                                                                                                                                                                                                                                                                                                                                                                                                                                      12321
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 analysis, characterisation or therapeutic use, or as markers for tissues in which the corresponding protein is expressed. Diagnostic methods from the present invention can be used to identify subjects having or at risk of developing a disease or disorder associated with aberrant expression or activity of (1). The assays can be utilised to identify a subject having or at risk of developing a disorder associated with Spastin protein or spastin gene expression or activity. The present sequence represents a mutated human spastin gene from the present invention.

N.B. The present sequence is not given in the present specification but is derived from the human spastin nucleotide sequence (AAH20174) as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          acid molecule in a sample. (I) is useful for diagnosing or aiding in the diagnosis of an early onset neurodegenerative disease in an individual. The neurodegenerative disease comprises reduced sensory nerve conduction, reduced motor nerve velocity, hypermyelination of retinal nerve fibres, atrophy of upper cerebellar vermis, absence of Purkinje cells and abnormal neuronal lipid storage. (I) can also be used to produce antisense nucleic acids, is useful as molecular weight or chromosome markers, to identify genetic disorders, as hybridisation probes or primers, as an antigen, identify and express recombinant protein for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             rne present invention describes human and mouse spastin, and mutated human spastin (autosomal recessive spastic ataxia of Charlevoix-Saguenay (ARSACS)) gene sequences (I). The spastin gene has been mapped to chromosome 13q11. (I) have neuroprotective antiquition and the sequences of the sequenc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (UYMC-)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             protein or spastin gene expression or activity. The present sequence encodes a mutated human spastin.

N.B. The present sequence is not given in the present specification to derived from the human spastin nucleotide sequence (AAH20174) as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               of developing a disease or disorder associated with aberrant expression or activity of (I). The assays can be utilised to identify a subject having or at risk of developing a disorder associated with Spastin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  analysis, characterisation or therapeutic use, or as markers for tissues in which the corresponding protein is expressed. Diagnostic methods from the present invention can be used to identify subjects having or at risk
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated polynucleotide, encoding spastin gene, and polypeptides, useful for diagnosing autosomal recessive spastic ataxia of Charlevolx-Saguenay disease by detecting two point mutations in spast
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         reduced motor nerve velocity; hypermyelination of retinal nerve fibre; atrophy of upper cerebellar vermis; absence of Purkinje cell; abnormal neuronal lipid storage; genetic disorder; characterisation; d
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 12793
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          gene therapy and as a spastin polypeptide agonists. (I), their fragments or their complements can be useful for assaying the presence of a nuclei
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Hudson

New isolated polynucleotide, encoding spastin gene, and polypeptides

12740

```
The present invention describes human and mouse spastin, and mutated C(human spastin (autosomal recessive spastic ataxia of Charlevoix-Saguenay C(ARSACS)) gene sequences (I). The spastin gene has been mapped to Cc chromosome 13q11. (I) have neuroprotective activities and can be used in Gene therapy and as a spastin polypeptide agonists. (I), their fragments C acid molecule in a sample. (I) is useful for diagnosing or aiding in the C diagnosis of an early onset neurodegenerative disease in an individual. C The neurodegenerative disease comprises reduced sensory nerve conduction, creduced motor nerve velocity, hypermyelination of retinal nerve fibres, c atrophy of upper cerebellar vermis, absence of Purkinje cells and C abnormal neuronal lipid storage. (I) can also be used to produce markers, to identify genetic disorders, as hybridisation probes or C analysis, characterisation or therapeutic use, or as markers for tissues in which the corresponding protein is expressed. Diagnostic methods from C analysis, characterisation or therapeutic use, or as markers for tissues in which the corresponding protein is expressed. Diagnostic methods from C the present invention can be used to identify subjects having or at risk of developing a disorder associated with aberrant expression C analysis, of (I). The assays can be utilized to identify a subject C having or at risk of developing a disorder associated with Spastin C encodes a mutated human spastin or activity. The present sequence C encodes a mutated human spastin nucleotide sequence (AAH20174) as C stated on page 14.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                           12501

```
CC proteins (AAU18154-AAU18281), and cDNA and genomic sequences encoding CC proteins (AAU18154-AAU18281), and cDNA and genomic sequences encoding CC for these proteins. DNA-binding proteins such as histones, chromo CC (chromatin organisation modifier) domain proteins, and Y-box binding CC proteins may contribute to diseases resulting from aberrant DNA CC organisation and/or gene transcription. The sequences of the invention CC are useful in screening assays to identify antagonists and/or agonists CC that may enhance or block activities mediated by DNA-binding proteins. CC such as malignant diseases (e.g. cancer), autoimmune disorders CC (e.g. diabetes mellitus), rheumatic diseases (e.g. rheumatold CC arthritis), genetic abnormalities (e.g. cystic fibrosis), infectious CC diseases (e.g. HIV) and neurological disorders (e.g. Alzhelmer's CC diseases (e.g. The polynucleotide sequences of the invention may also be CC used in gene therapy. AAS29030-AAS29157 represent cDNA sequences CC encoding for novel DNA-binding proteins.

CC Note: The sequence data for this patent did not form part of the printed Specification, but was obtained in electronic format directly from WIPO CX at ftp.wipo.int/pub/published_pct_sequences.

AAIT3060 to AAIT9867 represent isolated human polymorphic polynucleotide sequences (I), which contain single nucleotide polymorphisms (SNPs). AAM53114 to AAM53329 represent peptides related to human polymorphic polynucleotide sequences. The sequences can be used in gene and protein therapy, and in vaccine production. (I) and the polypeptides encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate expression of polymorphic polypeptides. For example, (I) may be used to treat disorders by rectifying mutations or deletions in a patient's genome that affect the activity of polypeptides by expressing inactive proteins or to supplement the patients own production of polypeptide. Additionally, (I) and its complementary sequences may also be used as DNA probes in diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               30-NOV-1999; 99US-0168138

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Š
      AAI73060 to AAI79867 represent isolated human polymorphic polynucleotide CC sequences (I), which contain single nucleotide polymorphisms (SNPs). AAM53114 to AAM53329 represent peptides related to human polymorphic polynucleotide sequences. The sequences can be used in gene and protein therapy, and in vaccine production. (I) and the polypeptides encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate expression of polymorphic polypeptides. CC ror example, (I) may be used to treat disorders by rectifying mutations or deletions in a patient's genome that affect the activity of complements own production of polypeptide. Additionally, (I) and its complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be used as antigens in the production of antibodies specific for polymorphic polypeptides. The production of antibodies specific for polymorphic polypeptides. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

The polypeptides encoded by (I) may be used as antigens in production of antibodies specific for polymorphic polypeptides. The antibodies may also be used to down regulate expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of polymorphic polypeptides in samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; single nucleotide polymorphism; SNP; genome; protein therapy; vaccine; probe; diagnostic assay; quantitation; restorative therapy; polymorphic; ds.

RESULT 1
         C polynoclectide sequences. The sequences can be used in gene and protein therapy, and in vaccine production. (I) and the polypeptides encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate expression of polynorphic polypeptides. For example, (I) may be used to treat disorders by rectifying mutations or deletions in a patient's genome that affect the activity of polypeptides by expressing inactive proteins or to supplement the polypeptides by expressing inactive proteins or to supplement the complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The polypeptides encoded by (I) may be used as antigens in the production of antibodies specific for polymorphic polypeptides. The conditions of antibodies should be used as diagnostic agents for detecting the antibodies may also be used as diagnostic agents for detecting the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                      CC therapy, and in vaccine production. (1) and the polypeptides encoded by CC them may be used in the prevention, diagnosis and treatment of diseases CC associated with inappropriate expression of polymorphic polypeptides. CC For example, (I) may be used to treat disorders by rectifying mutations CC or deletions in a patient's genome that affect the activity of CC polypeptides by expressing inactive proteins or to supplement the CC patients own production of polypeptide. Additionally, (I) and its CC complementary sequences may also be used as DNA probes in diagnostic CC assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The polypeptides encoded by (I) may be used as antigens in the CC production of antibodies specific for polymorphic polypeptides. The antibodies may also be used to down regulate expression and activity. CC The antibodies may also be used as diagnostic agents for detecting the presence of polymorphic polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

                                                 QΥ
                                                                                                                                                                                                                                                                                     AAI73060 to AAI79867 represent isolated human polymorphic polynucleotide sequences (I), which contain single nucleotide polymorphisms (SNPs).

CC AAM53114 to AAM5329 represent peptides related to human polymorphic CC polynucleotide sequences. The sequences can be used in gene and protein CC therapy, and in vaccine production. (I) and the polypeptides encoded by C them may be used in the prevention, diagnosis and treatment of diseases CC associated with inappropriate expression of polymorphic polypeptides. CC For example, (I) may be used to treat disorders by rectifying mutations CC or deletions in a patient's genome that affect the activity of CC polypeptides by expressing inactive proteins or to supplement the CC patients own production of polypeptide. Additionally, (I) and its CC complementary sequences may also be used as DNA probes in diagnostic cassays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be used as antigens in the CC production of antibodies seconded by (I) may be used as antigens in the CC antibodies may also be used to down regulate expression and activity. CT he antibodies may also be used as diagnostic agents for detecting the presence of polymorphic polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁

                                                                                          CC AAI73060 to AAI79867 represent isolated human polymorphic polynucleotide CC sequences (I), which contain single nucleotide polymorphisms (SNPs). CC AAM53114 to AAM53329 represent peptides related to human polymorphic CC polynucleotide sequences. The sequences can be used in gene and protein CC therapy, and in vaccine production. (I) and the polypeptides encoded by CC them may be used in the prevention, diagnosis and treatment of diseases CC associated with inappropriate expression of polymorphic polypeptides. CC for example, (I) may be used to treat disorders by rectifying mutations CC or deletions in a patient's genome that affect the activity of CC polypeptides by expressing inactive proteins or to supplement the polypeptides by expressing inactive proteins or to supplement the CC complementary sequences may also be used as DNA probes in diagnostic CC cassays to detect and quantitate the presence of similar nucleic acids CC in samples, and therefore which patients may be in need of restorative CC therapy. The polypeptides encoded by (I) may be used as antigens in the CC production of antibodies seconded by (I) may be used as antigens in the CC antibodies may also be used to down regulate expression and activity. CT he antibodies may also be used as diagnostic agents for detecting the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequences AAS45296-AAS45520 represent chemically pretreated genomic DNA molecules associated with the cell cycle and specific PCR primers of the invention. The sequences are useful for detecting the methylation state of all CpG dinucleotides in a sequence and therefore for analysing associated diseases. By analysing cytosine methylations in the pretreated DNA, genetic and/or epigenetic parameters for the diagnosis and therapy of existing diseases or the predisposition to specific diseases can be ascertained. The parameters may be compared to another set of genetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          and/or epigenetic parameters, the differences serving as basis for diagnosis and/or prognosis events which are disadvantageous to patients. The sequences of the invention are useful for the diagnosis and therapy of HIV infection, neurodegenerative disorders, graft-versus-host disease, aging, glomerular disease, Lewy body disease, arthritis, arteriosclerosis, solid tumours and cancers.
                                                                                                                                                                                                                                                                2569

                                                                                                                                                                                                                                               The present sequence represents a human expressed sequence tag (EST). The polynucleotide, which is a secreted EST, and the encoded protein are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, haematopolesis regulating activity, tissue growth activity, haematopolesis regulating chemotactic/chemokinetic activity, activin/inhibin activity, chemotactic/chemokinetic activity, activity, anti-inflammatory activity, cadherin/tumour invasion suppressor activity, tumour inhibition activity. The polynucleotide may also be useful for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 1; Page 523; 618pp; English.
